# Speedy

Speedy, the Rosselli driveshaft circular saw bench, is the bigger machine proposed by our company: it is equipped with a spacious table (850x1350 mm) to place the wood and with a Ø 700 blade.

In order to guarantee a comfortable, fast and above all safe cut, the Rosselli firm has also studied a newly designed wood-block: an ergonomic and functional solution expressly developed to avoid both possible contacts with the disk and the dangerous rotations of the wood during the cutting phases.

Compared with traditional saw benches, Speedy allows cutting not only defined shape logs, but also irregular shape logs and bundles of branches. This saw bench is completely built in Italy with very high quality materials in order to produce a long-lasting machine.
